

GPS Origins® Ancestry Test

PINPOINT YOUR DNA

Where am I from?
What are my family's roots?

Find out by unlocking the treasure trove of information stored in your DNA. GPS

Origins answers these and more of life's most important family-history questions, using the very latest technology and unique algorithms offered nowhere else. The places your ancestors called home are encoded in your DNA. Let us help to discover your roots and give you a deeper understanding and connection to your unique family history. Developed by a leading population geneticist from England's University of Sheffield, this test provides specific, pinpoint bio-geographical results.

Collect your DNA using painless cheek swabs, return the samples to us, and within a few short weeks, we'll email you a link to your online interactive ancestry report.

Test Details

Benefits:

- GPS Origins includes many unique ancestral informational markers that cannot be found in other commercial tests
- It utilizes 80,000 autosomal DNA markers, which are compared to 1,000+ reference populations and 41 gene pools for the most targeted bio-geographical results possible—sometimes down to the town or village level
- If you've already done a different ancestry test, GPS Origins helps to provide an even more complete picture of your heritage

Online Interactive Test Results Include:

- Maps of the top three ancestral origins (the gene pools or ancestral communities that contributed to significant portions of genetic makeup) along with the percentages of DNA inherited from each
- A comprehensive gene-pool profile containing your complete DNA percentages
- A detailed map illustrating maternal and paternal migration journeys, showing the last three places and times when your family's DNA signature went through a significant change with stories describing how your ancestors' circumstances may have changed as they crossed territories and continents to find better lives
